

Stormwater Program

The City's new stormwater code and the Lake Oswego Stormwater Management Manual are now in effect. Manual files are available using the links below.

Missed our March 11 briefing on the new stormwater requirements for development and other construction projects? The presentation is [here](#).

In the early 1990's, the Federal Clean Water Act was amended to require select urban areas to have a municipal stormwater (or MS4) permit. In Oregon, this program was delegated to the Oregon Department of Environmental Quality (DEQ). Clackamas County was one of the jurisdictions required to obtain an NPDES permit, and the City of Lake Oswego is one of the 13 co-permittees on the Clackamas County permit. The City of Lake Oswego received their NPDES stormwater permit from DEQ in 1995. The NPDES Permit has subsequently been renewed in 2004 and in 2012, and is due for renewal again on March 1, 2017.

The permit requires the City to:

1. Manage stormwater at City facilities and on the City right of way
2. Require stormwater management on private parcels as they develop or redevelop
3. See that stormwater facilities are properly operated and maintained
4. Provide additional oversight for high pollutant-load generating areas (industrial & commercial)
5. Control erosion from construction
6. Control non-stormwater discharges to the storm drainage system
7. Provide public and staff education and outreach around stormwater best practices
8. Provide opportunity for public involvement and participation, particularly at the time of permit renewal
9. Undertake targeted evaluations of specific issues as required by DEQ
10. Monitor the stormwater system; and
11. Report annually on City activities related to the permit. (Recent annual reports are available [here](#).)

Stormwater Management Manual

This Manual, and related amendments to the City's drainage and surface water utility codes, is a requirement of our current NPDES stormwater permit (part of Item 2 in the list above). The Manual emphasizes the use of infiltration-based approaches to stormwater management where possible, along with other low-impact development (LID) techniques to minimize runoff from roofs, streets, driveways, and other impervious surfaces. The manual applies to the design of newly developing and re-developing sites, and has requirements based on different thresholds of impervious surface area. The City Council approved the stormwater code amendments on February

[Make Your Own Household Cleaners](#)

Buy, Use, and Dispose of Household Products Wisely to Help Protect Our Water

The products you use for cleaning contain ingredients that may harm you, your family and the environment. Using household products incorrectly can allow dangerous chemicals to enter Oregon's streams and rivers.

[Permits, Plans and Reports](#)

The City of Lake Oswego's obligations toward our stormwater permit ("municipal separate storm sewer" or MS4) and related water quality ("total maximum daily load" or TMDL) are outlined in a number of plans and progress reports, provided as Supporting Documents. These Supporting Documents are prepared by the City in response to the MS4 permit and TMDL analyses.

o

[Education and Outreach](#)

Stormwater runoff occurs on dispersed land surfaces including pavements, yards, driveways, and roofs. Runoff picks up pollutants that are then transported down curb and gutters, pipes, and ditches to our streams and Oswego Lake. Improving water quality requires that we are careful about what we allow onto the land surface, either intentionally or unintentionally.

o

[Erosion Control Permit and Information](#)

Lake Oswego is committed to protecting the environment of the city and the surrounding area through its Stormwater Management Utility. In an effort to further protect our water sources, Erosion Control Permits are required for construction projects under any of the following circumstances:
